Choosing a Fixed Cardinality Set

Jimmy Lee & Peter Stuckey

SetSelect Question Revised (baguaCard-10-8.dzn)

Given a subset of numbers 1..nSpots for each symbol in SYMB, choose a subset of 1..nSpots of size size which includes at most one from each subset and maximize the damage points of the chosen set

```
nSpots = 10;
damage = [10, 8, 4, 2, 6, 9, 5, 3, 8, 10];
size = 3;
SYMB = {'天','澤','火','雷','風','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^{\dagger}','^
```

SetSelect Revised Addition (baguaCardSet.mzn)

Additional constraint

```
card(attacks) = size;
```

Executing the model

```
attacks: {5,7,9} & damage: 19;
```

But we can model a set with known cardinality differently!

3

Deciding a Fixed Cardinality Set

■ Instead of a set variable

```
var set of SPOT: attacks;
with cardinality constraint
  card(attacks) = size;
```

■ An array of size elements

```
array[1..size] of var SPOT: attacks;
```

- and some other constraints ...
- Why: suppose nSpots = 1000, size = 4
- # First representation: 1000 Boolean variables
- Second representation: 4 integer variables

4

Deciding a Fixed Cardinality Set

 ■ Consider

```
array[1..3] of var 1..10: x;
```

- How many possible values? 1000
- # And var set of 1..10: x; with
 card(x) = 3;
 10 * 9 * 8 / 3 * 2 * 1 = 120
- First issue: some array solutions are not sets of cardinality 3

```
\bullet e.g. [1,1,1] = \{1\}, [1,2,1] = \{1,2\}
```

Solution: ensure all different

```
forall(i,j in 1..u where i < j)
   (x[i] != x[j]);</pre>
```

5

Deciding a Fixed Cardinality Set

■ Consider

```
array[1..3] of var 1..10: x;
forall(i,j in 1..u where i < j
    (x[i] != x[j]);</pre>
```

How many possible values?

```
10 * 9 * 8 = 720
```

Second issue: multiple representations of the same set

```
e.g. {1,6,10} = [1,6,10], [10,1,6], [10,6,1], [1,10,6], [6,10,1], [6,1,10]
```

■ Solution: ensure ordered

```
forall(i in 1..u-1)(x[i] < x[i+1]);
```

6

Deciding a Fixed Cardinality Set

- How many possible values?
 - 10 * 9 * 8 = 720
- Second issue: multiple representations of the same set
 - e.g. {1,6,10} = [1,6,10], [10,1,6], [10,6,1], [1,10,6], [6,10,1], [6,1,10]
- Solution: ensure ordered

```
forall(i in 1..u-1) (x[i] < x[i+1]);
```

7

Critical Issues in Modeling Decisions

- Decisions in the problem
 - are not necessarily the decisions in the model
- # If possible make them identical but
 - what if you are deciding
 - · a path in a graph,
 - a tree structure
- Critical modeling issue (1)
 - decisions in the model (satisfying constraints)
 - are valid decisions in the problem
- Add constraints to make this so
 - e.g. add constraints forcing array elements ≠

8

Critical Issues in Modeling Decisions

- Multiple decisions in the model
 - reflect the same decision in the problem
 - e.g. x = [1,2,7], x = [7,2,1] for $x = \{1,2,7\}$
- Critical modeling issue (2)
 - try to have only one set of decisions in the model corresponding to each solution
 - reflect valid decisions in the problem
- # Add constraints to remove all but one set
 - e.g. add constraints forcing array elements <

9

SetSelect Question Revised (baguaCard-10-8.dzn)

Given a subset of numbers 1..nSpots for each symbol in SYMB, choose a subset of 1..nSpots of size size which includes at most one from each subset and maximize the damage points of the chosen set

```
nSpots = 10;
damage = [10, 8, 4, 2, 6, 9, 5, 3, 8, 10];
size = 3;
SYMB = {'天','澤','火','雷','風','水','山','地'};
group = [{1,4,6}, {1,2,6,7}, {1,3,6,8}, {1,2,3},
{2,9,10}, {5,6,8,10}, {7,8,10}, {1,3,5}];
```

   (attacks[i] < attacks[i+1]);</pre>
constraint forall(s in SYMB)(sum(i in 1..size)
   (attacks[i] in group[s]) <= 1);</pre>
var int: totalDamages =
   sum(i in 1..size)(damage[attacks[i]]);
solve maximize (totalDamages);
```

Bagua Fixed Cardinality Model (baguaCardInt.mzn) int: nSpots; set of int: SPOT = 1..nSpots; array[SPOT] of int: damage; enum SYMB; array[SYMB] of set of SPOT: group; int: size; array[1..size] of var SPOT: attacks; constraint forall(i in 1..size-1) (attacks[i] < attacks[i+1]); constraint forall(s in SYMB) (sum(i in 1..size) (attacks[i] in group[s]) <= 1);</pre> var int: totalDamages = sum(i in 1..size) (damage[attacks[i]]);

Solving the Model

15

solve maximize (totalDamages);

```
attacks: [5,7,9] & damage: 19;
```

Summary

- There are multiple ways to represent fixed cardinality sets
 - var set of OBJ + cardinality constraint
 - good if the solver natively supports sets
 - good when OBJ is not too big
 - array[1..u] of var OBJ
 - good when u is small
- * Two critical issues in modelling decisions
 - ensure each solution to the model is a solution of the problem
 - try to ensure each solution of the problem only has one solution in the model (symmetry)
